- 28mm Bore and stainless steel overbraid
- 1" or 1-1/4" BSP Female or Male Connection
- 19mm wall thickness PVC coated Insulation
- Complies with MIS 3005

Product Information

Made in compliance with MIS 3005 standards, our flexible hoses simplify connecting flow and return pipes to heat pumps and biomass boilers. These hoses dampen vibrations and enable smooth bends during installation. They feature a 28mm inner hose encased in a protective stainless-steel braid.

For easy connection, one end has a male or female BSP thread, while the other uses a 28mm compression fitting. All hoses come pre-insulated with a durable 19mm thick PVC coating that resists weather and UV rays.
